**Expected Result :**

1. The O-RU NETCONF Server performs a software activation procedure. When the procedure is completed, the O-RU NETCONF Server sends **<notification><activation-event>** with a status **COMPLETED** and the slot-name in the activation event corresponds to the slot-name used in the software-activate RPC to the **TER NETCONF Client**.
2. Status of the software slot containing the software still used by device remains **VALID**, the parameter "active" is set to False. The parameter "running" is True.
